

NIKO Jib Cranes

NIKO ... Quality in Motion

NIKO Jib Cranes

NIKO manufactures and supplies a wide range of different types of jib cranes, that can be freestanding, clamp around an existing column or bolt directly onto a wall.

Comprising of various arm types, NIKO jib cranes are built to customer requirements to ensure they fully satisfy the customers lifting requirements.

Features

- ✓ SWL: 80 - 2000kg
- ✓ Arm length: up to 6m
- ✓ Column height: up to 5m
- ✓ Arm types: profile track, under-braced I-beam, over-braced I-beam and articulated/ knuckle
- Fixing: freestanding, wall fixing, clamp around column fixing
- ✓ Slewing arc: 270° on standard arms or 360° on articulated arms
- Finish: powder coated, zinc plated, hot dip galvanised or stainless steel

Advantages

- ✓ Made to order, no costs for excess steel or cutting
- ✓ Free and easy to operate
- ✓ Low maintenance
- ✓ Lubrication-free bearings used on majority of jib arms
- ✓ Base fabricated directly to pillar and therefore expensive foundation frames are not required

Over-braced (OB) Profile Jib cranes

In OB Profile Jib cranes the bracings are located above our NIKO track profile. This type is the most free running along the arm length and therefore is generally the easiest type for the operator to use.

Freestanding Jib crane

NIKO freestanding jib cranes are supplied in kit form and comprise of 2 main parts: the pillar and the arm. The pillars are designed and fabricated to suspend the required jib arm type. The arm is fixed to the column using a pivot pin. The arm then rotates around the pillar and enables lifting within a predetermined arc.

* Columns are available up to 5 metres upon request. Jib cranes are supplied painted.

Clamp around Column Mounted Jib Cranes

NIKOcolumn mounted jib cranes comprise of an arm and a pair of brackets that can be clamped around an existing building column/ stanchion/ pillar. The support structure must be tested by a structural engineer to ensure it is strong enough to sustain the weight of the jib when loaded. The arm is then located between the pair of clamping brackets and fixed using a pivot pin. The arm then rotates around the support column and enables lifting within a predetermined arc. Anti-slip measures must be taken to ensure that the jib crane cannot slip down the support column.

Wall Mounted Jib crane

NIKOwall mounted jib cranes comprise of an arm and a pair of brackets that can be bolted or welded to an existing wall or building column/ stanchion/ pillar. The support structure must be tested by a structural engineer to ensure it is strong enough to sustain the weight of the jib when loaded. The arm is then located between the pair of clamping brackets and fixed using a pivot pin. The arm then rotates around the support column and enables lifting within a predetermined arc.

Jib cranes are supplied painted.

Under-braced (UB) I-beam Jib cranes

I-Beam Jib Cranes are generally used when powered travel is required along the arm. Under-braced I-beam jib cranes, are braced below the arm onto the underside of an I-beam. These are the lowest headroom variation and therefore are normally used in areas where headroom is limited.

Over-braced (OB) I-beam Jib cranes

Over-braced I-beam jib cranes are braced the same as profile arms, but with an I-beam underneath rather than a NIKOtrack profile. These are generally used when powered travel is required along the arm.

Jib cranes are supplied painted.

Special applications of Jib cranes

We can provide other types of jib cranes including articulated jib cranes, under-braced NIKOtrack profile, telescopic arms or ceiling mounted Jib Cranes. These are normally bespoke fabrications designed to meet very specific non-standard requirements.

Articulated Jib cranes

In articulated jib cranes, the arm is made in 2 sections. The 2 arm sections pivot at the joint and therefore allow the arm to cover an almost complete 360° slewing arc.

Free standing articulated Jib crane

Clamp around Column Mounted articulated Jib Cranes

Wall mounted articulated Jib crane

Ceiling Jib Cranes

Articulated ceiling Jib crane

UB I-beam ceiling Jib crane

OB I-beam ceiling Jib crane

OB Profile ceiling Jib crane

Additional components for I-Beam jib cranes

NIKO trolleys for hoists, cable trolleys and cable end clamps for all types of I-beam jib cranes.

Slewing limit for jib cranes

The slewing limit restricts the rotation of the arm for such angles as to prevent the impact of the load at fixed points and contribute in safer workspace.
